Chief, Military-Scientific Division, PIC

Requirement:

25X1

1. The photography of LOGOVOYE Airfield was studied in an attempt to locate electronic sites and communication facilities.

2. An inner and outer marker beacon are located in line and east of the concrete runway. An unidentified structure north of and connected with the outer marker beacon may be a marker beacon for the natural surface runway. The presence of marker beacons to the east of the runway only is consistent with tire markings on the east end of the runway and an overrun on the west end of the runway which indicate that landings are generally made from the east.

3. A possible radar site and two unidentified possible electronic sites are located at the airfield. The possible radar site, located 1700 feet southwest of the east end of the runway, consists of a flat-roofed building 35 by 35 feet and a possible van type vehicle approximately [redacted] No antennas can be identified. One of the unidentified possible electronic sites is located 2300 feet west of the east end of the natural surface runway and 1025 feet from its centerline. The other unidentified possible electronic site is located 4,700 feet east of the west end of the runway and 1375 feet from the runway centerline. Each of the sites consists of a rectangular flat-roofed building approximately 30 by 25 feet. No antennas can be identified.

25X1

4. No communication facilities can be identified at the airfield.
